

# DIVINE AHAKA

Software Engineer · Full-Stack · AI Integration · OSS Builder

[Portfolio](#) | [kamecyahaka@gmail.com](mailto:kamecyahaka@gmail.com) | [LinkedIn](#) | [GitHub](#)

## PROFESSIONAL EXPERIENCE

**Software Engineer** – [Topibro Technologies](#) (Software Development Agency)

**Jan 2025 – Present**

- Delivered 10+ client-facing web applications across 5+ industries between West and East Africa, owning frontend implementation from architecture to production release
- Integrated frontend systems with 40+ REST and third-party APIs, including contributing to the design of internal endpoints, handling authentication flows, error states, and edge-case scenarios
- Improved application performance by 30% through bundle optimisation, lazy loading, and render efficiency improvements, alongside Firestore query structuring and Cloud Functions cold-start reduction
- Collaborated with 12+ cross-functional stakeholders (designers, backend engineers, PMs, and clients) per project.
- Mentored and supported 6 frontend interns, providing onboarding, code reviews, and weekly technical guidance
- Refactored and stabilised legacy client codebases, reducing frontend technical debt by 40%
- Participated in full-stack technical planning, estimation, and delivery for projects ranging from 4 to 16 weeks, contributing to backend decisions including Firestore data modelling and CI/CD pipeline setup

**Frontend Engineer** – [Seamailer](#) (Email Marketing Service)

**Aug 2024 - Jan 2025**

- Led the development of a complex directed graph visualisation UI using **Vue Flow** for the flagship automation feature, completing the project 2 weeks ahead of schedule
- Designed and implemented a modular component system that reduced feature development time by 35% and improved UI consistency across 5+ major product areas
- Led technical decisions on frontend tooling, frameworks, and libraries, ensuring long-term scalability and maintainability
- Integrated frontend applications with 30+ backend services and third-party APIs, ensuring reliable data flow and fault tolerance.
- Implemented complex state management supporting 20+ asynchronous workflows, real-time updates, and cross-feature data synchronisation
- Spearheaded the development of an SEO-optimised landing page using Nuxt 3, implementing Google Analytics integration and technical SEO best practices
- Contributed to the end-to-end frontend architecture for a production platform used by over 50k+ contacts, supporting 100+ customers across core product modules.
- Delivered fully responsive, mobile-first interfaces, an interactive dashboard with analytics and metrics, achieving 95%+ Lighthouse accessibility scores.

## VOLUNTEER WORK

[The PATH PROJECT](#) - Web Development Lead, Boy Advocacy Project

- Architected a full-stack blog platform using Nuxt 4, Firebase, and Supabase with role-based access control (RBAC) protecting sensitive admin functions
- Implemented an automated content publishing system using GitHub Actions, enabling scheduled post releases with zero manual intervention
- Built a comprehensive CMS with TinyMCE integration, allowing non-technical users to create and manage content efficiently
- Implemented rate limiting for authentication endpoints using Upstash Redis to prevent brute-force attacks
- Built real-time role-enforcement that immediately revokes access when admin privileges are changed
- Created a multi-role admin panel with features for user management, post drafts, categories/tags management, and analytics dashboard

## PROJECTS

[Logrithm](#) – AI-Powered GitHub Activity Analyzer (OSS)

- Designed and built a full-stack developer analytics platform from scratch, including a deterministic 5-dimension activity scoring algorithm, AI-generated narrative insights via Gemini 2.5 Flash, and a viral Duolingo-style insight card sharing system
- Architected a privacy-first data layer on Firestore with per-user repo visibility classification (`public` / `private_personal` / `private_org`), server-side privacy filtering before AI analysis, and granular user-controlled disclosure settings

- Implemented a secure GitHub OAuth token pipeline with tokens stored in GCP Secret Manager per-user via Cloud Functions, never persisted in Firestore or passed through the client after initial auth
- Built a cross-user anonymous comparison system with nightly percentile computation across global, language, and country cohorts, gated behind a freemium plan architecture with server-side enforcement in Cloud Functions
- Engineered a background analysis scheduler using Firebase Cloud Functions that detects significant activity changes via snapshot comparison before triggering Gemini API calls, reducing unnecessary AI spend

Accessible Widgets – NPM Accessibility Package

- Authored and published a TypeScript accessibility library, with 70+ downloads, implementing ARIA Authoring Practices Guide standards for menu widgets, enabling developers to add WCAG-compliant keyboard navigation to web applications
- Implemented configurable ARIA attributes (aria-expanded, aria-label, aria-labelledby) and bidirectional keyboard navigation patterns (menubar, standard) to accommodate different use cases
- Architected automated CI/CD pipeline using GitHub Actions to streamline releases, automatically publishing new NPM versions following semantic versioning (semver) upon pull request merges to the main branch
- Implemented an automated changelog generation system that parses commit messages and pull request metadata, maintaining clear release documentation and version history for package consumers

CORE COMPETENCIES

- |                                              |                                            |
|----------------------------------------------|--------------------------------------------|
| ● Frontend Architecture and Component Design | ● Backend Architecture and API Design      |
| ● Performance Optimization and Web Vitals    | ● Responsive and Cross-Browser Development |
| ● RESTful API Development and Integration    | ● Technical SEO Implementation             |
| ● Developer–Designer Collaboration           | ● Role-Based Access Control (RBAC) Design  |
| ● Authentication and Authorization Systems   | ● Agile / Sprint-Based Development         |
| ● AI API Integration and Prompt Engineering  | ● Freemium SaaS Architecture               |

TOOLS

- |                                                                                                     |
|-----------------------------------------------------------------------------------------------------|
| ● Frontend and Frameworks – Vue.js, Nuxt.js, React.js, Next.js                                      |
| ● State Management – Vuex, Pinia, Zustand, Context API                                              |
| ● Styling and UI – TailwindCSS, SCSS, Vuetify, ShadCN                                               |
| ● Backend, Auth and Data – NodeJS, Firebase, Supabase, Express, Nitro, Google Cloud Platform        |
| ● Analytics, SEO and Experimentation – Google Analytics, PostHog, Google Search Console             |
| ● CI/CD Workflow – Git, GitHub, GitHub Actions, Vite, Webpack, Jest, semantic-release, Firebase CLI |
| ● Product and Design – Figma                                                                        |
| ● Project Management – Jira, ClickUp, Trello                                                        |

EDUCATION

- |                                                                                     |                              |
|-------------------------------------------------------------------------------------|------------------------------|
| ● <b>B.Sc. Software Development</b> – Brigham Young University, Idaho, USA (Remote) | <b>Jan. 2023 – Dec. 2026</b> |
|-------------------------------------------------------------------------------------|------------------------------|

TRAINING AND CERTIFICATIONS

- |                                                                         |             |
|-------------------------------------------------------------------------|-------------|
| ● <b>Brigham Young University, Idaho</b> – Web and Computer Programming | <b>2024</b> |
|-------------------------------------------------------------------------|-------------|
